

Product Information Inquiry (Internal Ref: AMB-001)

Date: 2026-09-20

Dear Medical Information Team,

I read online that CardioRelax may cause dizziness in some patients. A colleague who takes CardioRelax mentioned she felt dizzy once last week after her evening dose. Could you clarify whether dizziness is a known side effect, and whether she should stop taking it?

She has not reported this to any doctor. No batch number available.

Regards,
Dana Whitfield
